Press Release

ASSA ABLOY Announces Integration of IP-Enabled Access Control Locks with IMRON IS2000 Security Management Software

LAS VEGAS, Nevada, April 15, 2015 — ASSA ABLOY, the global leader in door opening solutions, announces the integration of its IP-enabled PoE (Power over Ethernet) and WiFi access control locks with the IS2000 v10 Security Management Software from IMRON Corporation, a leading provider of access control technology.

The IP integration offers end-users more options for expanding their physical security system easily and affordably using IP-enabled locks from ASSA ABLOY Group brands CORBIN RUSSWIN and SARGENT. The IP-enabled range include locks that connect to a host system through an existing 802.11b/g/n WiFi network, and IEEE 802.3af compliant Power over Ethernet (PoE) locks that connect to the Local Area Network (LAN) utilizing a single Ethernet cable for both power and data.

IMRON's IS2000 software can be customized to manage any size system, while offering a complete security management solution that adheres to open architecture standards. IS2000's built-in web server allows users to access and control the system remotely. IMRON's IS2000 platform also supports ASSA ABLOY's Aperio™ wireless lock technology.

"Expanding our partnership with IMRON allows users more flexibility to maximize the utility of their physical access control system," said Martin Huddart, President Access and Egress Hardware Group, ASSA ABLOY Americas. "The integration of ASSA ABLOY IP-enabled locks with the IS2000 platform allows facilities to leverage their IT infrastructure to bring electronic access control deeper into the building at a much lower cost."

“Our continued work with ASSA ABLOY reconfirms our commitment to providing the broadest range of access control solutions for our customers,” stated Fawzia Archa, Product Manager, IMRON Corporation. “ASSA ABLOY is a proven leader in IP lock technology and we are pleased to provide our customers with innovative solutions for enhancing the security of their facilities.”

ABOUT IMRON Corporation

Founded in 1997, IMRON Corporation is a major provider of Security Management Systems to brand name manufacturers around the world. In 2003, IMRON Corporation expanded operations to include complete system solutions direct to system integrators, combining state of the art software, IS2000 and field proven and reliable hardware in one valuable conscious package. Today, the IS2000 suite of scalable products is available directly through system integrators, providing the most advanced integration of access control, alarm monitoring, video surveillance and multiple third party products. The IMRON Corporation solutions have been installed globally in more than eight thousand sites. For more information visit <http://imron.com/>.

ABOUT ASSA ABLOY

ASSA ABLOY is the global leader in door opening solutions, dedicated to satisfying end-user demands for security, safety and convenience. For more information visit <http://www.assaabloy.com/en/com/>.
