Software House's C•CURE 9000 Goes Wireless with Integration to ASSA ABLOY IP Locks

*Two security leaders combine efforts to provide a security solution that simplifies
installation and reduces installation costs*

Westford, MA – January 20, 2012 – Software House, part of Tyco Security Products, today announced the launch of the integration of its [C•CURE 9000 security and event management](#) solution with IP-enabled Wi-Fi and Power over Ethernet (PoE) locks from ASSA ABLOY Group brands SARGENT and CORBIN RUSSWIN.

"Wireless and PoE locks significantly reduce the cost of bringing electronic security deeper inside dorm buildings, offices, hospitals and other sites," said Warren Brown, Vice President of Product Management for Tyco Security Products. "Rather than carrying a bulky key ring, students, employees and administrators can now use one card throughout the buildings they need access to. At the same time, when an incident occurs, administrators get the added visibility wireless locks provide on who really accessed important locations and when."

On October 27, 2011, Software House hosted a vehicle from the ASSA ABLOY Mobile Innovation Fleet to educate consumers on their various locksets.

The ASSA ABLOY integration includes the SARGENT Profile Series v.S1 and v.S2 locks, SARGENT Passport 1000 P1 and P2 locks, along with CORBIN RUSSWIN's Access 700 PIP1 and PWI1 and Access 800 WI1 IP-enabled locks. These locks simplify installation and reduce installation costs by utilizing existing ethernet and Wi-Fi networks to communicate with the C•CURE 9000 server. ASSA ABLOY's Wi-Fi and PoE locks are available in cylindrical lock, mortise lock and exit device configurations.

"ASSA ABLOY is dedicated to providing solutions that address end-user security needs, including electronic locking platforms that operate with existing building management software systems," said Martin Huddart, Vice President of Electronic Technologies for ASSA ABLOY Americas. "Software House believes, as we do, in empowering the end-user by providing powerful and easy-to-implement IP-based security technologies. This partnership enhances the ability of end-users to expand their access control systems from the perimeter door to the interior of the building."

Software House and ASSA ABLOY have worked closely to fully test and certify the integration, giving security directors the confidence that the integration will give them the functionality they need with up to 150,000 users and 1,280 wireless locks per C-CURE 9000 server. "At Software House, we are committed to working closely with our partners like ASSA ABLOY to ensure our integrations work the way our customers want and at the scale they need for large sites like universities, corporations and hospitals," said Mr. Brown. "The testing and collaboration with ASSA ABLOY that went into this integration are just further evidence of the strength of our commitment."

The ASSA ABLOY integration driver and locksets are available from Software House's North American network of Certified Integrators.

About ASSA ABLOY

ASSA ABLOY is the global leader in door opening solutions, dedicated to satisfying end-user demands for security, safety and convenience. ASSA ABLOY Group brands SARGENT and CORBIN RUSSWIN offer an array of IP enabled locksets. For more information, visit www.intelligentopenings.com.

About Software House

Software House, part of Tyco Security Products, manufactures security and event management systems including the innovative C-CURE 9000. Combined with a suite of reliable controllers lead by the iSTAR Edge IP door control module, Software House technologies are among the most powerful in the industry. Add an unsurpassed integration platform that allows customers to integrate seamlessly with critical business applications, and it's easy to see why Software House solutions are ideal for security-critical applications.

Tyco Security Products, a business unit of Tyco International, is a unified group of leading access control, video and intrusion brands worldwide. Operating in more than 40 offices with over 2500 employees, Tyco Security Products' American Dynamics, Bentel, CEM Systems, CONNECT24, DSC, Kantech, Software House, Sur-Gard and Visonic brands represent more combined years of operating experience in the security industry than any other security products group in the world. Our security integration platforms, built by our developers from across all product disciplines, allow our customers to see more, do more and save more. Our solutions today are designed to be compatible with the technology of tomorrow.
